

Data Center Colocation from The Planet

State-of-the-art “green” design and high power-density capability highlight colocation solution in North Dallas

Data Center Colocation at The Planet

- World-class, SAS 70 Type II-audited data centers in Dallas
- Industry-leading network speed and bandwidth capacity
- State-of-the-art Network Operations Center
- High power-density capable
- Remote hands and eyes
- Wide variety of support-on-demand options
- Multiple-layer network security protection
- Monitored physical security and access 24x7

Using the latest modular cooling technology from Turbine Air Systems (TAS), the mixed-use data center features N+1 cooling and power architectures, with state-of-the-art, high-efficiency, water-cooled chillers. And the data center’s gone green—its architectural design features an equipment galley outside of the data center floor, housing six large air-handling units and all chilled-water piping. Because all water is outside of the actual data center floor, the design puts the breaks on any possibility of an interior water leak.

The Planet’s state-of-the-art, high-efficiency N+1 cooling and power architecture is backed by five on-site, diesel-powered generators with a minimum three-day fuel supply. There are also two 30,000-gallon water-storage tanks for the facility’s chillers.

So The Planet pulls out all the stops to make sure you get continuous uptime operation of power and water systems, independent of potential brownouts, outages or water-supply interruptions. The Planet data center expects to achieve a high coefficient of efficiency” ranking. Recognized by the Environmental Protection Agency (EPA) and the Uptime Institute, this score demonstrates The

The Planet’s data center facility in North Dallas has 106,000-square-foot available for colocation services. This facility offers a world-class, SAS 70 Type II-audited colocation environment with unmatched network speed and bandwidth capacity, local and remote Network Operations Centers, expert support services and high power density.

Planet’s total commitment to value and reliability in an ultra-efficient colocation solution.

World-Class Colocation Offerings

At The Planet, colocation is a key focus. We offer a range of colo options, including dedicated locking cabinets to private cage rentals. Our colocation configurations and service options at The Planet provide an optimum solution, along with flexibility to expand and scale as your business needs change.

Locking Cabinets

The Planet offers colocation cabinets in a highly secure storage environment, while ensuring your collocated equipment stays cool and powered up. The Planet colocation cabinet is great for small and growing server installations.

Private Cages

The Planet offers private cages are build the way you want them to. We offer max flexibility and a proper, secure environment for customers who require multiple cabinets and guaranteed floor space for future expansion.

High-Speed Network Options

The Planet provides ultra-high-speed network connections through either direct network feeds or blended feeds, enabling you to bypass the local loop and tie in directly to the Internet.

Redundant Power

The Planet offers redundant circuits as optional services in all of its colocation facilities.

Redundant circuits give you a second circuit path that can mitigate the potential for power outages within your cabinet or cage area.

24x7 Access and Security

The Planet assures 24x7 online and in-person access, along with a wide range of self-service tools for reboots, monitoring, bandwidth graphs and more. It's all backed by state-of-the-art, on-site and online security. Supported by industry-leading Service Level Agreements (SLAs) that encompass both colocation and IP connectivity, you get a high-quality, competitively priced colocation solution that's right for you.

Flexible On-Site Services and Expertise

The Planet's experienced, certified hosting experts are always standing by and ready to tackle your administration tasks with remote hands and eyes, as well as more advanced services. At The Planet, you only pay for the help you need—nothing more.

Remote Hands and Eyes

Remote Hands and Eyes services are provided to every colocation customer, with 24x7 data center expertise and assistance on demand. Our certified colocation engineers can access equipment immediately, slashing your costs for technician visits, and rapidly addressing hands-on needs in an emergency when speed is critical. You also have the option to purchase specific routine support and maintenance tasks.

Add-On Managed Services

While remote hands and eyes assure basic on-site, first-line maintenance and support, The Planet gives you the flexibility to add special Add-On Managed services as needed. These include server monitoring & remediation and security and server administration services. These services let you create the optimal management plan for your business. They'll lower your operational costs and improve the security and availability of your collocated environment.

Professional Services

The Planet offers an experienced staff of certified engineers available to help you with any specific project or tasks you may need in trouble shooting or managing issues in your collocated infrastructure. Services can be billed on an hourly basis or through a service contract customized to your specific requirements.
